

Argo Development Studio was founded by its Managing Director, David Campion.

David has lectured and tutored at the School of Architecture, DIT, Ireland and has over 20 years of industry experience in design and development, working across a number of sectors in the US, across Europe and in the Caribbean.

The delivery of a number of award winning 'design build' projects inspired David to create his own Development Studio that focused on achieving greater efficiencies in the design and development process.

Argo provides efficient expertise, cost certainty and on time delivery to its clients. Argo safeguards the project journey, from concept to completion through strong leadership serving as a client guardian of built asset delivery.

This Brochure features some of the projects David has worked on throughout his career.

CTE - CENTRE OF TECHNICAL EXPERTISE

Argo's CTE team specializes in the design development stage and offers technical input across all Argo Development Studio projects.

Our CTE's service also extends to design practices, contractors or developers in need of additional technical support. Our experienced team members will work seamlessly alongside an existing team or provide a complete, managed solution on behalf of the client. They will provide logical, detailed solutions using construction technologies to form the link between design and delivery.

Building Information Modelling

Our certified BIM professionals implement 4D - Virtual Clash Detection with Program Sequencing and 5D - Cost Analysis including Quantity Take-off. We are also integrating 6D - Energy Performance Analysis and finally 7D - Facility and Operations Management into our project modelling.

IBC and Building Control Regulations

At Argo Development Studio, we ensure projects achieve compliance with the latest relevant regularity requirements. Every element of the design is cross checked to ensure that it meets or betters the local or international building codes. Our team will co-ordinate with local building control authorities and fulfil the role of assigned certifier by preparing and submitting all required documentation and performing thorough onsite inspections. By doing so we safeguard the client's interests while providing an increased level of comfort to their customers.
